

Moving Up 2 extra

Exercise 1 (Reading skill: Main Idea)

For **main idea**, students should be able to identify the most important idea or message of the text.

How Archaeologists Learn About the Past

How do we know how people lived thousands of years ago? There were no photographs, videos, or social media posts to record their daily lives. Instead, archaeologists study objects and places left behind by people from the past. These discoveries provide important clues about ancient societies.

Archaeologists often study objects called artifacts, such as tools, coins, jewelry, and pottery. These objects can reveal how people worked, what they ate, and what they valued. For example, finding cooking tools and animal bones can give researchers information about the food people prepared and ate.

Archaeologists also examine buildings, graves, and other ancient sites. Before removing anything, they carefully record where each object was found. The location of an artifact can be just as important as the object itself because it helps researchers understand how it was used. Modern technology, such as digital maps and special scanning equipment, can also help archaeologists study sites without damaging them.

Each discovery adds another piece to our understanding of history. A single object may not tell the whole story, but many pieces of evidence together can reveal how people lived long ago. Archaeology allows us to learn about societies that may have left few or no written records.

Comprehension — Main Idea

1. What is the main idea of the passage?

- A. Archaeologists use different kinds of evidence to understand the past.
- B. Ancient people did not know how to write.
- C. Archaeologists mainly collect valuable objects.

2. What is the main idea of the second paragraph?

- A. Ancient people used many kinds of cooking tools.
- B. Artifacts can provide information about how people lived.
- C. Coins are the most useful archaeological discoveries.

3. What is the main point of the third paragraph?

- A. Archaeologists carefully study sites and the locations of objects.
- B. Modern technology has replaced traditional archaeology.
- C. Ancient buildings are difficult to find.

4. Why does the writer mention cooking tools and animal bones?

- A. To explain how ancient people made tools
- B. To show that old objects can provide clues about daily life
- C. To prove that ancient people ate more meat

5. Which statement best summarizes the final paragraph?

- A. Written records are the only reliable way to understand history.
- B. Archaeologists need to find complete objects at every site.
- C. Different pieces of evidence can work together to reveal the past.

Word Bank: artifacts · evidence · ancient · reveal · archaeologists

1. _____ study objects and places to learn about the past. **(archaeologists)**
2. Tools, coins, and pottery are examples of _____. **(artifacts)**
3. Old objects can _____ information about how people once lived. **(reveal)**
4. Researchers study _____ sites to understand earlier societies. **(ancient)**
5. Many pieces of _____ can help us understand history. **(evidence)**

1. study / ancient objects / Archaeologists/ to understand / human history

Archaeologists study ancient objects to understand human history.

2. in the past / can reveal / Pottery/ about daily life/ information

Pottery can reveal information about daily life in the past.

3. examine/ safely/ Modern technology / ancient site / helps experts

Modern technology helps experts examine ancient sites safely.

4. can provide/ information/ valuable/ The location of /an artifact

The location of an artifact can provide valuable information.

5. pieces of evidence /reconstruct/ Different/ the past / can help

Different pieces of evidence can help reconstruct the past.

Exercise 2 (Reading skill: Facts and details)

For **facts and details**, students should be able to find specific facts and details that are directly stated in the text.

Life on the International Space Station

The International Space Station (ISS) is a large research station that travels around Earth. It moves at about 28,000 kilometers per hour and completes an orbit around Earth roughly every 90 minutes. Astronauts from different countries live and work there, carrying out scientific experiments and learning more about life in space.

Daily life on the ISS is very different from life on Earth because of microgravity. Astronauts float instead of walking, so everyday activities require special equipment. They sleep in sleeping bags attached to a wall so they do not float around. Their food is specially prepared, and drinks are usually kept in sealed containers.

Exercise is an important part of an astronaut's daily routine. In microgravity, muscles and bones can become weaker because they do not work against gravity in the same way as on Earth. Astronauts therefore exercise for about two hours each day using special equipment. They also spend much of their working day doing experiments, checking equipment, and communicating with teams on Earth.

Living in space can be challenging, but astronauts also experience things that people on Earth cannot. Because the ISS travels around Earth so quickly, astronauts can see many sunrises and sunsets in a single day. They can also look down at oceans, mountains, cities, and storms from hundreds of kilometers above Earth.

Comprehension — Facts and Details

1. About how long does the ISS take to complete one orbit around Earth?

- A. 30 minutes
- B. **90 minutes**
- C. Two hours

2. Why do astronauts attach their sleeping bags to a wall?

- A. **To prevent themselves from floating around**
- B. To stay warmer during the night

C. To save space for experiments

3. How long do astronauts exercise each day?

- A. About 30 minutes
- B. About one hour
- C. **About two hours**

4. Why is exercise especially important in space?

- A. Astronauts need to prepare for spacewalks every day.
- B. **Muscles and bones can become weaker in microgravity.**
- C. Exercise helps the ISS move faster.

5. What can astronauts see from the ISS?

- A. Only oceans and clouds
- B. Other planets in detail
- C. **Oceans, mountains, cities, and storms**

Word Bank: microgravity · orbit · equipment · exercise · experiments

1. The ISS completes an _____ around Earth about every 90 minutes. **(orbit)**
2. Astronauts float because they live in _____. **(microgravity)**
3. Astronauts use special _____ to work and live safely in space. **(equipment)**
4. They _____ for about two hours each day to keep their bodies strong. **(exercise)**
5. Astronauts carry out scientific _____ to learn more about life in space. **(experiments)**

1. living in/ Astronauts / a very different /must adapt to / environment

Astronauts must adapt to living in a very different environment.

2. travels / at an extremely / The space station / around Earth / high speed

The space station travels around Earth at an extremely high speed.

3. to work safely / Special equipment / astronauts /in space / allows

Special equipment allows astronauts to work safely in space.

4. use / to conduct / Scientists / the space station / important research

Scientists use the space station to conduct important research.

5. requires /planning / Living in space/ careful / and preparation

Living in space requires careful planning and preparation.

Exercise 3 (Reading skill: Sequence of events)

*For **sequences of events**, student should be able to Identify the order in which events or steps happen.*

How a Broken Bone Heals

Imagine falling off your bike and breaking your arm. It may sound frightening, but your body immediately begins an amazing process to repair the damage. When a bone breaks, nearby blood vessels are also damaged. Blood collects around the broken area and forms a clot, which protects the injury while special cells begin removing damaged tissue.

After several days, the body starts building a soft callus around the broken bone. This callus acts like a temporary bridge that connects the broken pieces and keeps them more stable. Over the next few weeks, the soft callus gradually becomes harder as new bone develops. A cast or other support may be used to keep the bone in the correct position while it heals.

Even after the bone joins together, the healing process is not completely finished. Over the following months, the body continues to reshape the new bone, making it stronger and closer to its original form. Eventually, the repaired area can become strong enough for normal movement again. Although healing takes time, the human body has an impressive ability to repair broken bones.

Comprehension — Sequence of Events

1. What happens soon after a bone breaks?

A. The bone returns to its original shape.

- B. Blood collects around the injured area and forms a clot.
- C. The body removes extra bone.

2. What happens after damaged tissue begins to be removed?

- A. A soft callus begins to form around the broken bone.
- B. The pain immediately disappears.
- C. The bone becomes completely healed.

3. What happens to the soft callus over the following weeks?

- A. It disappears immediately.
- B. It changes into muscle tissue.
- C. It becomes harder as new bone develops.

4. What does the soft callus do?

- A. It connects the broken pieces and keeps them stable.
- B. It removes damaged blood vessels.
- C. It makes the bone weaker.

5. Which shows the correct order of the healing process?

- A. Callus forms → blood clot forms → tissue is removed → bone reshapes
- B. Blood clot forms → damaged tissue is removed → callus develops → bone reshapes
- C. Damaged tissue is removed → bone reshapes → blood clot forms → callus develops

Word Bank: stable · reshape · clot · damaged · callus

1. Blood collects around the broken bone and forms a _____. (**clot**)
2. Special cells help remove _____ tissue from the injured area. (**damaged**)
3. The body forms a soft _____ around the broken bone. (**callus**)
4. As new bone develops, the broken pieces become more _____. (**stable**)
5. The body continues to _____ the repaired bone over several months. (**reshape**)

1. to repair / The human body / damaged bones / has an amazing / ability

The human body has an amazing ability to repair damaged bones.

2. after / bone injury / Swelling and pain / are common / a serious

Swelling and pain are common after a serious bone injury.

3. develops / gradually / New tissue / the injured area / around

New tissue gradually develops around the injured area.

4. for bone health / can provide / Healthy food / nutrient / important

Healthy food can provide important nutrients for bone health.

5. the pain/ The healing process / disappears/ may continue/ even after

The healing process may continue even after the pain disappears.

Exercise 4 (Reading skill: Cause and effect)

*For **cause and effect**, students should be able to identify what causes something to happen and what happens as a result.*

Life in a Noisy City

Cities are full of sounds. Cars, motorcycles, construction work, trains, and crowds can create noise from early morning until late at night. Some city sounds are a normal part of daily life, but when noise becomes too loud or continues for a long time, it becomes noise pollution.

Constant noise can make it difficult for people to relax or concentrate. Someone studying near a busy road, for example, may find it harder to focus because traffic sounds keep interrupting their attention. Loud environments can also make people feel more stressed, especially when they cannot control or escape the noise.

Noise at night can cause another problem: poor sleep. Traffic, music, or construction may wake people up or prevent them from sleeping deeply. As a result, they may feel tired and less alert the following day. Over time, regularly losing sleep can affect a person's mood, concentration, and overall well-being.

Cities can reduce noise pollution in several ways. Trees and green spaces can help reduce some sound, while quieter roads and better building design can protect people from unwanted noise. Reducing unnecessary noise can make cities more comfortable and healthier places to live.

Comprehension — Cause and Effect

1. What can cause noise pollution in a city?

- A. **Traffic, construction, and other loud activities**
- B. Having too many green spaces
- C. People sleeping at night

2. What may happen when traffic noise keeps interrupting someone who is studying?

- A. They may study faster.
- B. **They may find it harder to concentrate.**
- C. They may become more interested in traffic.

3. What can happen because of loud noise at night?

- A. People may sleep more deeply.
- B. People may wake up earlier by choice.
- C. **People may not get enough good-quality sleep.**

4. How can poor sleep affect people the following day?

- A. **They may feel tired and less alert.**
- B. They may become more energetic.
- C. They may hear sounds more clearly.

5. What can be an effect of reducing unnecessary city noise?

- A. Cities may need more construction work.
- B. **Cities can become more comfortable places to live.**
- C. More people will use motorcycles.

Word Bank: concentrate • pollution • alert • stressed • reduce

- 1. Too much noise in a city can become noise _____. (**pollution**)
- 2. Loud traffic can make it difficult for students to _____. (**concentrate**)
- 3. Constant noise may cause people to feel more _____. (**stressed**)

4. Poor sleep can make people feel less _____ the next day. **(alert)**
5. Trees and green spaces can help _____ some city noise. **(reduce)**

1. to relax / Loud traffic / can make it /at home / difficult / for people

Loud traffic can make it difficult for people to relax at home.

2. A peaceful / can help people / environment / more relaxed / feel

A peaceful environment can help people feel more relaxed.

3. more pleasant places/ to live / Green spaces / can make / cities

Green spaces can make cities more pleasant places to live.

4. city noise /can create /Reducing / living environment / a healthier

Reducing city noise can create a healthier living environment.

5. are often / Busy streets /residential areas / noisier than

Busy streets are often noisier than residential areas.

Exercise 5 (Reading skill: Compare and contrast)

For **Compare and contrast**, students should look at the information and identify how the two things are similar or different.

Human Eyes and Cameras

Every time you open your eyes, your body does something similar to taking a photograph. In less than a second, your eyes collect light and send information to your brain, allowing you to see the world around you. A camera also uses light to create an image. Although one is part of the human body and the other is a machine, they work in surprisingly similar ways.

When light enters your eye, it passes through the pupil. In bright sunlight, the pupil becomes smaller, while in a dark room, it becomes larger to let in more light. A lens inside the eye then focuses the light onto the retina at the back of the eye. The retina turns this light into signals and sends them to the brain, which helps you understand what you are seeing.

A camera follows a similar process. Instead of a pupil, it has an opening called an aperture that controls how much light enters. Its lens focuses the light onto a digital sensor, much like the lens in your eye focuses light onto the retina. The camera then processes this information and saves it as a photograph.

There is one important difference. A camera simply records an image, but your eyes work together with your brain to make sense of what you see. You can recognize a friend's face, notice a moving car, or read the words on a screen almost immediately. A camera may copy some of the eye's basic functions, but the human visual system does much more than simply take pictures.

Comprehension — Compare and Contrast

1. What is one similarity between human eyes and cameras?

- A. Both save photographs.
- B. **Both collect light to create images.**
- C. Both send information to the brain.

2. How are the pupil and aperture similar?

- A. **Both control the amount of light that enters.**
- B. Both store visual information.
- C. Both create light.

3. What is similar about the retina and a camera sensor?

- A. Both control the size of an opening.
- B. Both help the brain understand images.
- C. **Both receive focused light.**

4. What is an important difference between an eye and a camera?

- A. Only cameras use lenses.
- B. **Eyes work with the brain to understand what we see, while cameras record images.**
- C. Cameras can see without light.

5. Which statement best compares human eyes and cameras?

- A. **They use some similar processes but have different abilities.**
- B. They work in completely different ways.
- C. Cameras can do everything that human eyes can do.

Word Bank: sensor · pupil · process · aperture · retina

1. Light enters the human eye through the _____. (**pupil**)
2. The _____ receives light at the back of the eye. (**retina**)
3. A camera uses an _____ to control how much light enters. (**aperture**)
4. A digital _____ receives light to help create a photograph. (**sensor**)
5. The brain can _____ information from the eyes very quickly. (**process**)

1. can / quickly adjust to / Human eyes/ levels of light/ different

Human eyes can quickly adjust to different levels of light.

2. understand / The brain / the images / helps us / our eyes receive

The brain helps us understand the images our eyes receive.

3. allows us / around us/ Our vision/ to recognize / people and objects

Our vision allows us to recognize people and objects around us.

4. can store / Digital cameras / photographs / thousands of

Digital cameras can store thousands of photographs.

5. depend on / to create images /Both /light / eyes and camera

Both eyes and cameras depend on light to create images.

Exercise 6 (Reading skill: Inference)

*For **Inference**, students should use clues in a text and what they already know to understand something the writer does not say directly.*

The Psychology of Supermarkets

Have you ever gone to a supermarket for one thing and left with a full shopping bag? This may not happen by accident. Supermarkets carefully organize their spaces, and even small details can influence how customers move through the store and what they decide to buy.

Popular everyday products, such as milk or eggs, are sometimes placed farther inside the store. To reach them, shoppers may have to walk past many other products. Colorful displays and special offers are also strategically placed where customers can easily see

them. Certain products may be placed at eye level to attract attention and encourage shoppers to consider buying them.

Supermarkets also pay attention to what happens near the checkout. While customers wait in line, they often see small, tempting items such as snacks, drinks, or batteries. Because these products are easy to pick up and do not seem very expensive, shoppers may make an impulse purchase—buying something they had not planned to get.

These techniques may seem simple, but together they can have a powerful effect on purchasing decisions. Making a shopping list and becoming more aware of product placement can help customers make more careful choices. The next time you visit a supermarket, look around—you may discover that almost every part of the store has been carefully planned.

.

Comprehension — Inference

1. Why might supermarkets place everyday products farther inside the store?

- A. To keep these products away from sunlight
- B. To encourage shoppers to pass and notice other products
- C. To make the supermarket easier to clean

2. What can you infer about products placed at eye level?

- A. The store may want shoppers to notice them more easily.
- B. They are always the most popular products.
- C. They are usually cheaper than other products.

3. Why are small, tempting products often placed near the checkout?

- A. They need to be protected by supermarket staff.
- B. Customers usually forget to buy them.
- C. Shoppers may make an impulse purchase while waiting.

4. What can you infer about the way supermarkets organize their stores?

- A. Most products are placed wherever there is enough space.
- B. Store design can influence customers' purchasing decisions.
- C. Supermarkets mainly organize products by their color.

5. What does the passage suggest about an aware shopper?

- A. They may think more carefully before buying unplanned items.

- B. They are more likely to choose products at eye level.
- C. They usually spend more time shopping.

Word Bank: tempting · influence · impulse · strategically · aware

1. Supermarkets can _____ customers' shopping decisions in different ways.
(influence)
2. Some products are _____ placed where shoppers can easily see them.
(strategically)
3. Snacks near the checkout may look _____ to hungry shoppers. **(tempting)**
4. Buying something without planning it is called an _____ purchase. **(impulse)**
5. Shoppers who are _____ of these techniques may make more careful choices.
(aware)

1. can encourage / to explore / Attractive display / shoppers / new products

Attractive displays can encourage shoppers to explore new products.

2. to purchase / Discounts / customers / extra items / can lead

Discounts can lead customers to purchase extra items.

3. make / while waiting / Some shoppers / unplanned purchases / at the check out

Some shoppers make unplanned purchases while waiting at the checkout.

4. a shopping list / their spending / Making / help people / control

Making a shopping list can help people control their spending.

5. can have / Product placement / shopping decision / a strong effect on

Product placement can have a strong effect on shopping decisions.

Exercise 7 (Reading skill: Analyzing language)

*For **Analyzing Language**, students should understand how a writer's choice of words affects meaning and feelings.*

Inside the World's Largest Garbage Dumps

Every day, cities around the world produce enormous amounts of rubbish. Much of it is taken to landfills, where waste is collected and buried. Some of the largest landfill sites

receive thousands of tons of rubbish each day. Massive piles of plastic bags, food containers, old clothes, broken furniture, and other unwanted items can cover huge areas of land.

A landfill is more than simply a place where rubbish disappears. As more trucks arrive, waste continues to build up, and the piles grow higher. Some materials, especially plastic, can remain there for decades because they break down very slowly. Food and other organic waste decompose and release gases into the air. Landfills can also produce polluted liquid that may harm the surrounding soil and water if it is not carefully managed.

Large landfill sites can have serious consequences for nearby communities. Strong smells, insects, smoke from fires, and polluted water can create difficult living conditions. In some parts of the world, people search through the waste for plastic, metal, and other valuable materials that can be sold or recycled. What looks useless to one person may become a source of income for another.

Looking across a huge landfill can make the amount of waste produced by modern life difficult to ignore. Every bottle, package, or piece of clothing was once something that someone bought and used. Landfills remind us that throwing something “away” does not mean it has truly disappeared. Instead, much of our rubbish remains in the environment, sometimes for many years after we have forgotten about it.

Comprehension — Analyzing Language

1. Why does the writer describe the piles of rubbish as “massive”?

- A. To show that the amount of waste is very large
- B. To explain that the rubbish is expensive
- C. To suggest that the rubbish is easy to remove

2. What does the description “the piles grow higher” help the reader understand?

- A. Landfills become cleaner over time.
- B. The amount of waste continues to increase.
- C. Most rubbish disappears quickly.

3. Why does the writer mention strong smells, insects, smoke, and polluted water together?

- A. To explain how landfill workers collect rubbish
- B. To describe the materials that can be recycled
- C. To emphasize the different problems faced by nearby communities

4. What does the sentence “What looks useless to one person may become a source of income for another” suggest?

- A. Waste can have different value to different people.
- B. All rubbish can easily be sold for money.
- C. People should throw away more valuable materials.

5. How does the final paragraph affect the overall message of the passage?

- A. It suggests that landfills are a temporary problem.
- B. It encourages readers to think about what happens to waste after they throw it away.
- C. It explains that most rubbish is quickly recycled.

Word Bank: surrounding • release • waste • environment • polluted

- 1. Cities around the world produce large amounts of _____ every day. **(waste)**
- 2. Organic materials can _____ gases as they break down. **(release)**
- 3. Landfills may produce _____ liquid that can harm soil and water. **(polluted)**
- 4. Large garbage dumps can affect the _____ communities. **(surrounding)**
- 5. Plastic can remain in the _____ for many years. **(environment)**

1. rubbish / environmental problems / Large amount of / can create / serious

Large amounts of rubbish can create serious environmental problems.

2. can seriously harm / soil and water / Poorly managed landfills / the surrounding

Poorly managed landfills can seriously harm the surrounding soil and water.

3. are affected / amount of waste / Some communities / by increasing

Some communities are affected by increasing amounts of waste.

4. the amount of / Reducing / can lower / unnecessary packaging / waste produced

Reducing unnecessary packaging can lower the amount of waste produced.

5. and healthier / Better waste management / environment / can create / a cleaner

Better waste management can create a cleaner and healthier environment.

Exercise 8 (Reading skill: Writer's purpose)

For **Writer's Purpose**, students should be able to identify whether a writer wants to inform, explain, persuade, entertain, or warn.

When Social Media Information Is Wrong

Social media allows information to travel around the world within minutes. A photo, video, or short post can quickly reach thousands of people. However, information that spreads widely is not always accurate. Some posts contain mistakes, while others may leave out important details or present information in a misleading way.

False information can spread especially quickly when a post is surprising, frightening, or emotional. People may share it immediately without checking where it came from. A dramatic headline or a short video can seem convincing, even when it does not show the complete story. Once thousands of people have shared a post, correcting the false information can become difficult.

Before sharing something online, it is important to check the **source**. Ask who created the information and whether other reliable sources report the same story. The date is also important because old photographs or videos are sometimes shared as if they show a recent event. Taking a few minutes to check these details can prevent inaccurate information from spreading further.

Social media can be a useful way to discover news and ideas, but users also have a responsibility to think carefully about what they share. A popular post is not automatically a trustworthy one. By checking information before passing it on, everyone can help create a more reliable online environment.

Comprehension — Writer's Purpose

1. What is the writer's main purpose in this passage?

- A. To entertain readers with stories about social media
- B. To warn readers about inaccurate information and explain how to check it
- C. To persuade readers to stop using social media

2. Why does the writer mention “surprising, frightening, or emotional” posts?

- A. To explain why some false information spreads quickly
- B. To show which posts are the most entertaining
- C. To encourage people to create more emotional content

3. Why does the writer discuss old photographs and videos?

- A. To explain how to save old social media posts
- B. To show that old content is always unreliable
- C. To give an example of how information can be presented in a misleading way

4. What is the purpose of the third paragraph?

- A. To describe how social media was created
- B. To advise readers how to check information before sharing it
- C. To compare different social media platforms

5. What does the writer want readers to do after reading the passage?

- A. Think carefully and check information before sharing it
- B. Avoid reading news on the internet completely
- C. Share popular posts as quickly as possible

Word Bank: accurate • misleading • source • reliable • responsibility

1. Information that is correct and true is considered _____. **(accurate)**
2. Some online posts can be _____ because they do not show the complete story. **(misleading)**
3. Always check the _____ to find out where the information came from. **(source)**
4. It is helpful to compare information with other _____ sources. **(reliable)**
5. Social media users have a _____ to think carefully before sharing information. **(responsibility)**

1. can spread rapidly / through / False information /social media

False information can spread rapidly through social media.

2. before sharing /the original source /We /information online / should check

We should check the original source before sharing information online.

3. can influence / information / Emotional headlines / react to /how people

Emotional headlines can influence how people react to information.

4. identify /Checking /can help /multiple sources /false information

Checking multiple sources can help identify false information.

5. online behavior /can create / Responsible /digital environment / a safer

Responsible online behavior can create a safer digital environment.

Exercise 9 (Reading skill: Recognizing coherence)

*For **Recognizing Coherence**, students should understand how ideas and sentences connect logically.*

Life in a Cashless Society

Imagine leaving home without any cash in your pocket. You buy breakfast with your phone, tap a card to enter the train, and order dinner through an app. For millions of people, this is already part of everyday life. As digital payments become more widely accepted, coins and banknotes are slowly becoming less important in daily transactions.

Going cashless has several advantages. Digital payments are fast and convenient—there is no need to search for the correct change or visit an ATM. Banking apps also allow people to track their spending almost immediately. This can help users understand where their money goes and manage their budget more effectively. Carrying less cash may also reduce the risk of losing physical money.

However, a cashless society is highly dependent on technology. A dead phone battery, a broken payment system, or a poor internet connection can suddenly make paying difficult. There is also a larger social concern. Not everyone owns a smartphone or has easy access

to banking services. If cash completely disappears, some people could be excluded from everyday activities simply because they cannot use digital payment methods.

The move toward digital payments is likely to continue, but convenience should not be the only goal. A modern payment system should also be reliable and accessible to everyone. A cashless future may make life easier for many people, but its success will depend on whether everyone is able to take part.

Comprehension — Recognizing Coherence

1. Which sentence best follows this idea?

“Digital payments are becoming a common part of everyday life.”

- A. **Many people now use phones or cards to pay for daily purchases.**
- B. Banknotes are usually made from special materials.
- C. Some people enjoy collecting old coins.

2. Which sentence does NOT belong in a paragraph about the advantages of digital payments?

- A. Banking apps can help people track their spending.
- B. Digital payments can make transactions faster and more convenient.
- C. **Smartphones are produced in many different models and colors.**

3. Among these sentences, which sentence should come first?

- A. As a result, customers may be unable to complete a transaction.
- B. **A digital payment system sometimes stops working.**
- C. This can cause difficulties for both customers and businesses.

4. Which sentence best connects these two ideas?

“Digital payments are convenient for many people. _____. This means a completely cashless society could exclude some groups.”

- A. **However, not everyone has access to smartphones or banking services.**
- B. Digital payments are used in many restaurants and shops.
- C. People have used different forms of money throughout history.

5. Which sentence is the most logical conclusion to the passage?

- A. Cash will certainly disappear everywhere within a few years.
- B. Digital payment is the only safe way to manage money.

C. A successful payment system should be both convenient and accessible.

Word Bank: accessible · transactions · track · convenient · dependent

1. Digital payments make everyday _____ faster and easier. **(transactions)**
2. Banking apps allow users to _____ how much money they spend. **(track)**
3. Paying by phone can be more _____ than carrying cash. **(convenient)**
4. Cashless payment systems are highly _____ on technology. **(dependent)**
5. Payment methods should be _____ to people from different groups.
(accessible)

1. Digital payments have become increasingly common in everyday life.

in everyday life /have become /Digital payments / increasingly common

2. their spending /can help users /manage / Mobile banking apps / more effectively

Mobile banking apps can help users manage their spending more effectively.

3. requires /and internet access / technology /reliable/ A cashless system

A cashless system requires reliable technology and internet access.

4. to everyone /Modern payment system /accessible to / should be

Modern payment systems should be accessible to everyone.

5. are changing /their money /Digital payments /how people / handle

Digital payments are changing how people handle their money.

Exercise 10 (Reading skill: Drawing conclusion)

For **Drawing Conclusions**, students should be able to combine several details from the text to understand something that is not directly stated

The Disappearing Bees

Bees may be small insects, but they play a significant role in the natural world. As bees travel from flower to flower collecting nectar, they transfer pollen between plants. This

process, known as pollination, allows many plants to produce fruits and seeds. Apples, strawberries, almonds, and many other crops depend heavily on pollinators such as bees.

In some regions, however, bee populations have been declining. Scientists believe several factors may be responsible. Certain chemicals used in agriculture can be harmful to bees, while the destruction of natural habitats leaves them with fewer sources of food. Changes in weather patterns can also affect when flowers bloom, making it more difficult for bees to find enough nectar.

The decline of bees could have serious consequences. If fewer flowers are pollinated, some plants may produce less fruit and fewer seeds. Farmers could experience lower crop production, while animals that rely on these plants for food may also be affected. As a result, a major decrease in bee populations could disrupt entire ecosystems.

People can help by planting a diverse range of flowers, protecting natural habitats, and limiting the use of harmful chemicals. Even small gardens can provide bees with valuable sources of food and shelter. Protecting bees is therefore not only about preserving one species—it can also help maintain the balance of ecosystems and support the food systems that humans depend on.

Drawing Conclusions – Choose the Best Answer

1. What can we conclude about the importance of bees to humans?

- A. Bees are mainly important because they produce honey.
- B. **Bees help support the production of many foods people eat.**
- C. Humans cannot grow any food without bees.

2. What is likely to happen if natural habitats continue to disappear?

- A. **Bees may have more difficulty finding enough food.**
- B. Bees will begin living only on farms.
- C. More flowers will grow in cities.

3. What can we conclude about a large decline in bee populations?

- A. It would only affect flowering plants.
- B. Farmers would stop growing fruits completely.
- C. **It could affect many parts of an ecosystem.**

4. Why can small gardens be helpful to bees?

- A. **They can provide additional food and shelter.**
- B. They protect bees from all harmful chemicals.

C. They prevent changes in weather patterns.

5. What conclusion can be drawn from the passage as a whole?

A. Only farmers are responsible for protecting bees.

B. **Protecting bees can benefit both nature and people.**

C. Bee populations will naturally recover without help.

Word Bank: consequences · pollination · declining · diverse · disrupt

1. Bee populations are _____ in some regions of the world. **(declining)**
2. Bees help plants reproduce through a process called _____. **(pollination)**
3. A major decrease in bees could _____ the balance of an ecosystem. **(disrupt)**
4. Environmental changes can have serious _____ for plants and animals.
(consequences)
5. Planting a _____ range of flowers can provide bees with more food. **(diverse)**

1. an important role / healthy ecosystems / Bees / in maintaining/ play

Bees play an important role in maintaining healthy ecosystems.

2. can threaten / populations / The loss of / wildlife / natural habitats

The loss of natural habitats can threaten wildlife populations.

3. insects / Harmful / may negatively affect / chemicals / and other animals

Harmful chemicals may negatively affect insects and other animals.

4. food production / in pollinations / global / A decline / may affect

A decline in pollinators may affect global food production.

5. the balance of nature / helps maintain / wildlife / Protecting

Protecting wildlife helps maintain the balance of nature.
